

CUSTOMER VALUE AND INTAKE MATH

Four numbers tell you what a lead can cost and whether ads make sense right now. Fill in your own column. The example column uses made-up numbers to show the arithmetic.

STEP 1. WHAT A CUSTOMER IS WORTH

Line	Your numbers	EXAMPLE (illustrative only)
A Average first-job value	\$ _____	\$400 (example)
B Gross margin on that job	_____ %	40% (example)
C Gross profit per first job ($A \times B$)	\$ _____	\$160 (example)
D Jobs per customer per year, including the first	_____	2 (example)
E Years a typical customer stays	_____	3 (example)
F Lifetime gross profit ($C \times D \times E$)	\$ _____	\$960 (example)

STEP 2. WHAT YOU CAN AFFORD TO PAY

Line	Your numbers	EXAMPLE (illustrative only)
G Most you'd pay to win one new customer (your call: part of C, or part of F)	\$ _____	\$160 (example: break even on the first job)
H Close rate: out of 10 leads, how many become customers?	_____ %	25% (example)
I Allowable cost per lead ($G \times H$)	\$ _____	\$40 (example)

STEP 3. WHAT YOU CAN ACTUALLY HANDLE

Line	Your numbers	EXAMPLE (illustrative only)
J New customers you can serve per month without straining the crew	_____	8 (example)
K Leads needed per month ($J \div H$)	_____	32 (example)
L Monthly ad budget ceiling ($K \times I$)	\$ _____	\$1,280 (example)

HOW TO READ IT

- If line **I** is lower than what leads realistically cost in your market, ads may need a stronger offer, a better close rate, or more lifetime value before they make sense.
- If line **J** is small, more demand won't help. Fix capacity first or you'll pay for leads you can't serve.
- Line **L** is ad spend only. It goes to Meta and Google from your own account. Count the management fee separately when you judge total return. Ours is \$3,000 a month.
- The example column is not a benchmark or a prediction. Your own numbers are the only ones that matter.
